Listing of Claims:

Claims 1-29 (Canceled)

30. (Currently Amended). A method of evening the texture of the skin of a mammal, said method comprising the step of applying to the skin a topical, skin care composition comprising:

(I) a non-denatured soy product derived from soybean selected from (a) a liquid soy product present in the composition at from about 50 to about 99% by weight or (b) a solid soy product present in the composition at from about 1 to about 50% by weight, wherein said product comprises a non-denatured non-denatured soy product containing contains trypsin inhibitory activity and the ingredients naturally found in soybeans, at the relative concentrations as found in soybeans; and

(II) a stabilizing system, said stabilizing system comprising a member selected from the group consisting of (i) from about 0.001 to about 20% by weight of an antioxidant; (ii) from about 0.001 to about 20% of a chelating agent; or (iii) from about 0.01 to about 20% of a preservative.

31. (Currently Amended). A method of increasing the elasticity and firmness of the skin of a mammal, said method comprising the step of applying to the skin a topical, skin care composition comprising:

(I) a non-denatured soy product derived from soybean selected from (a) a liquid soy product present in the composition at from about 50 to about 99% by weight or (b) a solid soy product present in the composition at from about 1 to about 50% by weight, wherein said product comprises a non-denatured non-denatured soy product containing contains trypsin inhibitory activity and the ingredients naturally found in soybeans, at the relative concentrations as found in soybeans; and

(II) a stabilizing system, said stabilizing system comprising a member selected from the group consisting of (i) from about 0.001 to about 20% by weight of an antioxidant; (ii)

from about 0.001 to about 20% of a chelating agent; or (iii) from about 0.01 to about 20% of a preservative.

32. (Currently Amended). A method of reducing the shine and oiliness of the skin of a mammal, said method comprising the step of applying to the skin a topical, skin care composition comprising:

(I) a non-denatured soy product derived from soybean selected from (a) a liquid soy product present in the composition at from about 50 to about 99% by weight or (b) a solid soy product present in the composition at from about 1 to about 50% by weight, wherein said ~~product comprises a nondenatured~~ non-denatured soy product ~~containing~~ contains trypsin inhibitory activity and the ingredients naturally found in soybeans, at the relative concentrations as found in soybeans; and

(II) a stabilizing system, said stabilizing system comprising a member selected from the group consisting of (i) from about 0.001 to about 20% by weight of an antioxidant; (ii) from about 0.001 to about 20% of a chelating agent; or (iii) from about 0.01 to about 20% of a preservative.

33. (Currently Amended). A method of treating cellulite in the skin of a mammal, said method comprising the step of applying to the skin a topical, skincare composition comprising:

(I) a non-denatured soy product derived from soybean selected from (a) a liquid soy product present in the composition at from about 50 to about 99% by weight or (b) a solid soy product present in the composition at from about 1 to about 50% by weight, wherein said ~~product comprises a nondenatured~~ non-denatured soy product ~~containing~~ contains trypsin inhibitory activity and the ingredients naturally found in soybeans, at the relative concentrations as found in soybeans; and

(II) a stabilizing system, said stabilizing system comprising a member selected from the group consisting of (i) from about 0.001 to about 20% by weight of an antioxidant; (ii) from about 0.001 to about 20% of a chelating agent; or (iii) from about 0.01 to about 20% of a preservative.

34. (Currently Amended). A method of treating and preventing sunburn on the skin of a mammal, said method comprising the step of applying to the skin a topical, skin care composition comprising:

(I) a non-denatured soy product derived from soybean selected from (a) a liquid soy product present in the composition at from about 50 to about 99% by weight or (b) a solid soy product present in the composition at from about 1 to about 50% by weight, wherein said product comprises a non-denatured non-denatured soy product containing contains trypsin inhibitory activity and the ingredients naturally found in soybeans, at the relative concentrations as found in soybeans; and

(II) a stabilizing system, said stabilizing system comprising a member selected from the group consisting of (i) from about 0.001 to about 20% by weight of an antioxidant; (ii) from about 0.001 to about 20% of a chelating agent; or (iii) from about 0.01 to about 20% of a preservative.
